## D.A. Glass America becomes OcuGlass, LLC

Calumet, MI - D.A. Glass America, Inc. has announced a change in ownership. IIWS, Inc. has agreed in principle to acquire 100% of the company and has changed the name to OcuGlass, LLC effective immediately. Current management will continue to operate the new company as the corporate structure moves forward under the new ownership. No changes to upper level management are anticipated.

Brad Aldrich, C.O.O., explained that the new name will more accurately reflect its overall product line as well as the evolving vision and standards of the company. He adds, "Our vision and standards have come into focus, as has our product line. This new name and structure will better suit our company as we continue to progress."

OcuGlass will continue to produce OcuMatte, its acid-etched glass product and has announced the launch of OcuWrite, its innovative writable surface acid-etched product. The company has plans to unveil chemically etched glass for electronics and horticulture, as well as a high transmittance, low reflectance product, which is intended for solar panel and window manufacturers. Information about the current products can be found on the company's website, [www.ocuglass.net](http://www.ocuglass.net).

OcuGlass, LLC started in 2013 as D.A. Glass America, Inc. and has operated under that name until the recent change of ownership. IIWS, Inc., was a minority shareholder and the managing partner in the business and has now acquired all of the shares and total ownership. Based in Calumet, Michigan, the company will keep all of its business and production functions in the current facility, the only one of its kind here in the United States. An IIWS spokesman stated, "With this change, all decisions will be under one roof and that will help us to better service our customers, control and promote our brands, and create more jobs in our community."
